- ✓ Improves Site Performance*
- ✓ Continuous Monitoring for Threats*
- ✓ Full Daily Site and Database Backups*
- ✓ DDoS and Brute Force Protection*
- ✓ Virtual Patching & Hardening Engine*
- ✓ Identifies and Blocks Malware*
- ✓ Customizable Reports*

### PROTECT

**ESP** is a managed security service from Zimcom that provides an added layer of firewall protection and threat mitigation for your website. With over 1.1 million web attacks occurring on the Internet each day, you can feel safe knowing Zimcom has you protected.

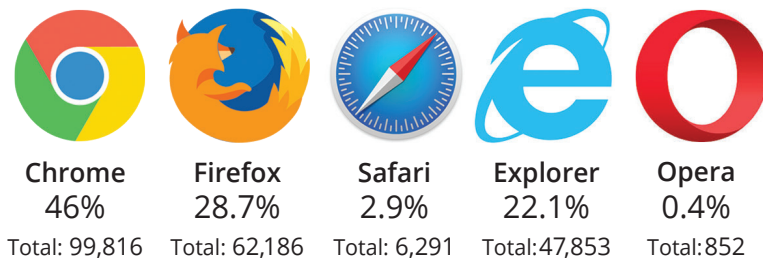

### DETECT

**ESP** provides continuous monitoring for website uptime, blacklisting, malware distribution, WHOIS and DNS changes, and SSL certificate availability. In the event an Indicator of Compromise (IoC) is detected, security personnel are alerted to troubleshoot and take action.

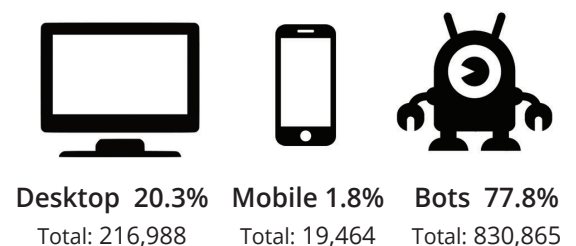

### RESPOND

**ESP** includes a team of security experts, available to respond to exploits and vulnerabilities that may occur. Our team of professionals can help clean infected sites, block website intrusions and attack vectors, as well as analyze the root cause of a security incident.

#### View Web Traffic by Browser Type

#### View Web Traffic by Device Type

**Intelligent design to sense threats and deal with them.**

## ENHANCED SITE PROTECTION

WORDPRESS

Drupal

Joomla!

Magento

### Responsive Website Security for Business

Cyber criminals are ramping up their attacks against businesses with new Zero-day vulnerabilities, sophisticated malware, ransomware attacks, and code exploits. The **ESP** platform provides your business the website security it needs to stay ahead of the latest web threats.

### Complete End-To-End Website Security for Enterprise Organizations

**ESP** for business combines features all companies need, with powerful and robust functionality. Some of the unique features include:

#### Continuous Monitoring -

Our monitoring system alerts you to any potential issues with your site including downtime, hacks, vulnerabilities, blacklistings, malware distribution, DNS changes, WHOIS modifications and more.

#### Compatible With Your Site -

**ESP** is platform agnostic, so whether your site was built in WordPress, Joomla, .NET, or custom code, we've got you protected.

#### Threat Mitigation -

**ESP** includes a virtual patching and hardening engine, allowing for real-time mitigation of threats, including Zero-days. **ESP** mitigates web attacks and bad traffic before it even reaches your site, ensuring only legitimate web traffic passes through.

#### Improved Performance -

Reap the benefits of increased site performance and 70% faster page load times with **ESP's** built-in Content Distribution Network (CDN) and web-caching features.

#### Website Backups -

With built-in backup protection, we'll make sure your website and database files are kept safe, secure, and available to you 24/7 in case you ever need to restore them.

#### Simple Deployment -

No installation required! **ESP** can be quickly enabled at the DNS level with a simple A record switch. Full DNS management is also available at no additional cost.

**Intelligent design to sense threats and deal with them.**
